Scenario: You are a new college student who is having trouble creating a schedule which helps you study for all of your classes effectively. You have to prioritize all of your many responsibilities including your studies and your work schedule since you are employed. Your current schedule has resulted in a rapid decrease in your grades and you need to find a way to properly manage your time.

Task 1: Enter your name into the app so that the app feels more personalized and friendly (Instead of just saying name say "name or nickname" so that the app feels more casual)

Task 2: Answer all of the questions in order to make sure that your schedule is as specific as possible (Create a way for the user to enter what times they are available like a weekly calendar)

Task 3:   Ask the user if the would like to receive notifications after finalizing and verifying their schedule. (Allow the user to view their schedule when opening the app in the future)

Changes:
1) Entering nickname
2) Create a way for the user to enter their weekly availability
3) Allow the user to view their schedule when opening the app after creating it rather than seeing the original welcome screen.

Constants:
1) Entering name
2) Use user input from the questions to create a weekly schedule
